

**INTEGRATED JSP AND COMMAND CACHE  
FOR WEB APPLICATIONS WITH DYNAMIC CONTENT**

5

ABSTRACT OF THE DISCLOSURE

A system and method are disclosed, according to which, the responsiveness of client/server-based distributed web applications operating in an object-oriented environment may be improved by storing both JSPs and commands in the same cache. Some of the code and data structures required for caching JSPs are the same as for commands, and are saved in a common area of the cache. A second area of the cache is reserved for code and data specific to JSPs, and a third area is reserved for code and data specific to commands. This arrangement avoids the difficulty of judiciously apportioning the available cache between JSPs and commands.
